KeePass is a fork of the old Password Safe program that has been created to offer a modern, powerful, extensible password management application that you can use on any computer, mobile phone or tablet. With the latest update, the project also supports the KeePassXC database format, which is based on the new OpenXC project. Why KeePass? There are so many different password management and database programs out there these days. How do you decide what program to use? In order to make an informed decision, you need to know all the facts. Here are some of the reasons why you should consider using KeePass. Manage your passwords in a secure way Use strong, unique passwords for all of your online accounts. There is no reason to use the same password for all of your accounts. KeePass will help you create strong, unique passwords that are easy to remember. Keep your passwords safe KeePass encrypts your passwords using AES (Advanced Encryption Standard) which is considered to be the strongest encryption algorithm. There is also a master password option so your encryption key is never stored in your machine or transferred to any other person. Cross-platform KeePass runs on Windows, Linux, Mac OS X and some

other operating systems. In fact, it has been tested and has proven to work on almost any system you can think of. Create your own database You can use the OpenXC database format (which is based on the new OpenXC project), or you can export your passwords to a format of your choice, including OpenXC, OpenLDAP, SQLite, plain text and CSV. Protect your data with encryption Protect your data with a high-grade encryption system. KeePass can encrypt your data for a while (up to 5 months) before you need to export it to a file. Secure passwords If you have an online account, chances are you have to use a password. KeePass gives you the option to generate strong passwords using a random password generator. Generate passwords with a simple mouse click Generate a new random password every time you visit an account, log into a website or use a program. Just type a single character and click 'Generate'. Securely lock your files If you need to store something online or on a computer, you may want to keep it locked with a password. You can use the built-in password lock feature of KeePass.
