Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Reminders can keep you on track. When a project is running late, you can serve up a reminder message. When you have a project assigned to you, you can create a reminder and send it to the project owner and let them know the deadline has passed. Another handy new feature, is the inclusion of the View Transform panel. It allows you to apply adjustments or start a resizing and cropping effect, without having to go into the Adjustments or Adjustment Layers panel settings. This must be opened by clicking on a height or width grid on a layer. The Universal Layers feature allows you to have the same layer on multiple images in a single project. New this time is the Touch Map function. You can move around the image on the Touch Map, a bit like you would do on a mobile app, to adjust layers, effects, and more. This can also help make multilayer adjustments to a photo. Access to the rotogravure and platinum effects that used to be part of the Raster Effects plugin is now available as part of the Photoshop Mixer, or you can go back to the Photoshop Layers panel and open the Effects panel as well. You can use the Scale and Stroke Mixer panel on the iPad Pro as a working stage while you work on the image in the preview window. When you expand a layer in the Layers panel, you can see previews. You can also drag a single image from the library into the panel and have it serve as the base layer, making it easy for you to work on multiple images. A new Enhance Slideshow feature simply allows you to play back the slideshow of an image sorted by the date it was added to your library. If you're familiar with the Slideshow feature in Lightroom, you will find that it works the same for the iPad, only it's the iPad's camera taking the shots.
