This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

I want to make it perfectly clear that the performance issues you witnessed in Creative Cloud do not apply to the Lightroom standalone version. I think you'll find Lightroom 5.2.0 performance to be solid and bulletproof. In my experience, the Lightroom standalone version is less affected by cloud issues, partially because we do not view those files as part of the stream. Instead, we serve the photos direct from disk, and only stream them to Creative Cloud in the event the user wants to make any edits such as applying color during the editing process.
