Adobe Photoshop pro community, after MASSIVE waiting and anticipation, today we are excited to announce several new additions to Photoshop and an upgrade to the existing Crowd favorite, the Mobile. From monumental redesign in the workspace to the new powerful selection tool, the areas you love, work and save in Photoshop have been further enhanced for better creativity and productivity. You remember the old Photoshop selection tools? They looked great and were fun to use. With Adobe Sensei you have more powerful, customizable and integrated selections — but if you want to add to what Sensei does, you can, any time. It's easy! Using the new Content Aware Selection to select specific areas in an image, Photoshop is able to make logical and intelligent selections across flat and curved surfaces, without clipping. This sort of selection in abstraction is very powerful. More, you can now directly edit the selection so you can make all sorts of creative edits. You can have more than just one selection active at a time and if you're working on something else, you can immediately continue editing without adding or losing your selections. This is useful for when you're working in the browser and need the most up to date edit. If you're doing plenty of content-aware edits, you want to be able to clean them up a bit and that's where the new Edit Refine tool comes in handy. Use it to clean up all the selection clipping — or just a layer or few. It's a powerful tool and is easy to use.
